

RECONDITIONING

Riddell® recommends that every student athlete be issued clean and sanitized apparel and equipment. This can be accomplished through the school, a sub-contractor or both. Regardless, this cannot be neglected.

Before reconditioning

After reconditioning

Find out more about reconditioning

Ask your Riddell® Sales Representative about Riddell's equipment reconditioning and recertification programs, or call us at 1-800-275-5338.

Your season is over, but your equipment's season shouldn't be.

The photos and captions on these pages will help you understand the reconditioning process.

1 After your Riddell® Rep ships your team's equipment to a Riddell® plant, helmets are carefully sorted and labeled.

2 Face masks and hardware are removed.

3 Buffing provides a smooth, blemish-free surface.

4 Helmets are sanitized by hot, pressurized water. Upgrade with Staph Fighter.

5 Helmets are immediately rinsed after sanitizing.

6 The warm air drying room ensures helmets are ready for the next step.

7 Helmet shells are closely inspected. Even hairline cracks keep the helmet from being recertified.

Helmets... shoulder pads... uniforms for all sports... all reconditioned by hand.

8 All interior components are tested and replaced as necessary.

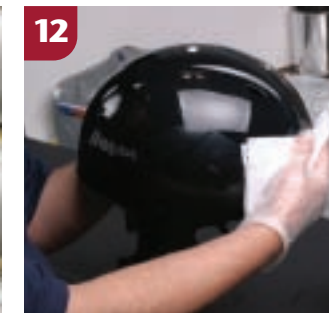

9 Air liners are inflated. Structural integrity is checked and re-checked. Stress or hairline cracks mean the helmet is rejected.

10 Spray booths provide painters with a moving line of primed helmets. As helmets approach the booth, they spin to facilitate the smoothest application of paint.

11 After helmets are sprayed with your choice of color and finish, they are again sent to dry, undisturbed.

12 Wax is applied to shells.

13 Snaps, rivets and hardware... expertly replaced. Your reconditioned face mask is re-attached.

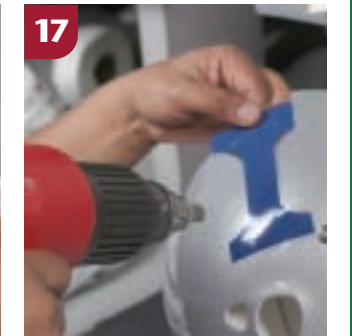

14 Teamwork is key to our game plan, and maximum efficiency gets our customers the best service.

15 Accessories are re-attached.

16 Original manufacturer warnings, labels and a recertification seal are applied.

17 Team decals and logos can be applied.

18 Recertification

19 Final inspection... "no compromises."

20 Finally, you're ready for game day!

Your cleaned, sanitized & recertified helmet looks great and meets the NOCSAE standard.
